

INTERNAL PROJECT REPORT

Submitted to: Department of Computer Applications

College Name: JG University

Course: BCA Semester 5

Date of Submission: 19th July 2025

Designed by:

- 1. Jeet Gandhi 1017**
- 2. Divy Rawal 1052**
- 3. Prince Savaliya 1061**
- 4. Kavya Sevak 1062**
- 5. Saiyam Shah 1064**

Project Overview:

Title: ConnectFarma

Tagline: Bringing Farmers to Families.

Project Type: In-House

Technology Stack: HTML, CSS, JAVASCRIPT, PHP/Python, MySQL

Reporting-1: Project Proposal & Planning

1. Project Title:

ConnectFarma – A Local Farmers Market Website

2. Problem Statement:

- a) Farmers face challenges in connecting directly with urban consumers due to the lack of digital platforms. This allows middlemen to take advantage, increasing their profits and selling products to consumers at a higher price. There is a need for a transparent, user-friendly platform to bridge this gap and facilitate direct transactions.

3. Existing System and Limitations:

- a) Offline Markets: Time-bound, location-specific, and lack reach.
- b) Existing Apps: Target large-scale agriculture or wholesalers, not local farmers.

Limitations include:

- a) No direct communication channels between farmers and buyers.
- b) Lack of trust and verification.
- c) Poor UI for illiterate farmers.

Additionally, Platforms like Blinkit, Swiggy Instamart, and Zepto also offer vegetable and fruit delivery services. However, these services often encounter quality issues because their core business models are not centered around fresh produce.

Since selling vegetables does not generate high profits for these companies, they do not focus significantly on improving quality or supply chain efficiency in this area.

ConnectFarma is specifically designed for selling vegetables and fruits. Our platform directly involves local farmers in managing their inventory, ensuring freshness, accountability, and transparency. This farmer-centric model eliminates intermediaries, placing quality control in the hands of those who grow the product.

ConnectFarma aims to be a niche platform dedicated to vegetables and fruits—an area currently underserved by mainstream delivery apps.

Advantages of ConnectFarma:

1. **Direct Farmer-to-Consumer Link**

Farmers can sell their produce directly to customers without middlemen, ensuring better profits.

2. **Fresh and Quality Produce**

Since farmers manage their own stock, customers receive fresh fruits and vegetables with assured quality.

3. **Fair Pricing**

Eliminating intermediaries results in transparent and reasonable pricing for both farmers and buyers.

4. **Focus on Fruits & Vegetables Only**

Unlike other platforms, ConnectFarma is fully dedicated to the fruits and vegetable segment, ensuring specialized service.

5. **User-Friendly Platform**

Designed with simplicity in mind for both farmers and consumers, including easy registration and order management.

6. **Community Empowerment**

It supports local agriculture, boosts farmer income, and promotes healthy eating in urban areas.

4. Proposed System:

Key Features & Functionalities:

- a. Farmer Portal: Register, upload products, update stock/pricing.
- b. Customer Portal: Browse, filter, search, and place orders.
- c. Admin Panel: Manage users, products, and handle disputes.
- d. Order System: Cart, payment, and delivery tracking.

Modules and Sub-modules:

Module	Sub-modules
Farmer Module	Registration, Login, Product Upload, Order Tracking
Customer Module	Registration, Product Browsing, Add to Cart, Place Order
Admin Module	Approved Users, View Reports, Manage Listings
Order Module	Invoice Generation, Status Updates, Delivery Coordination

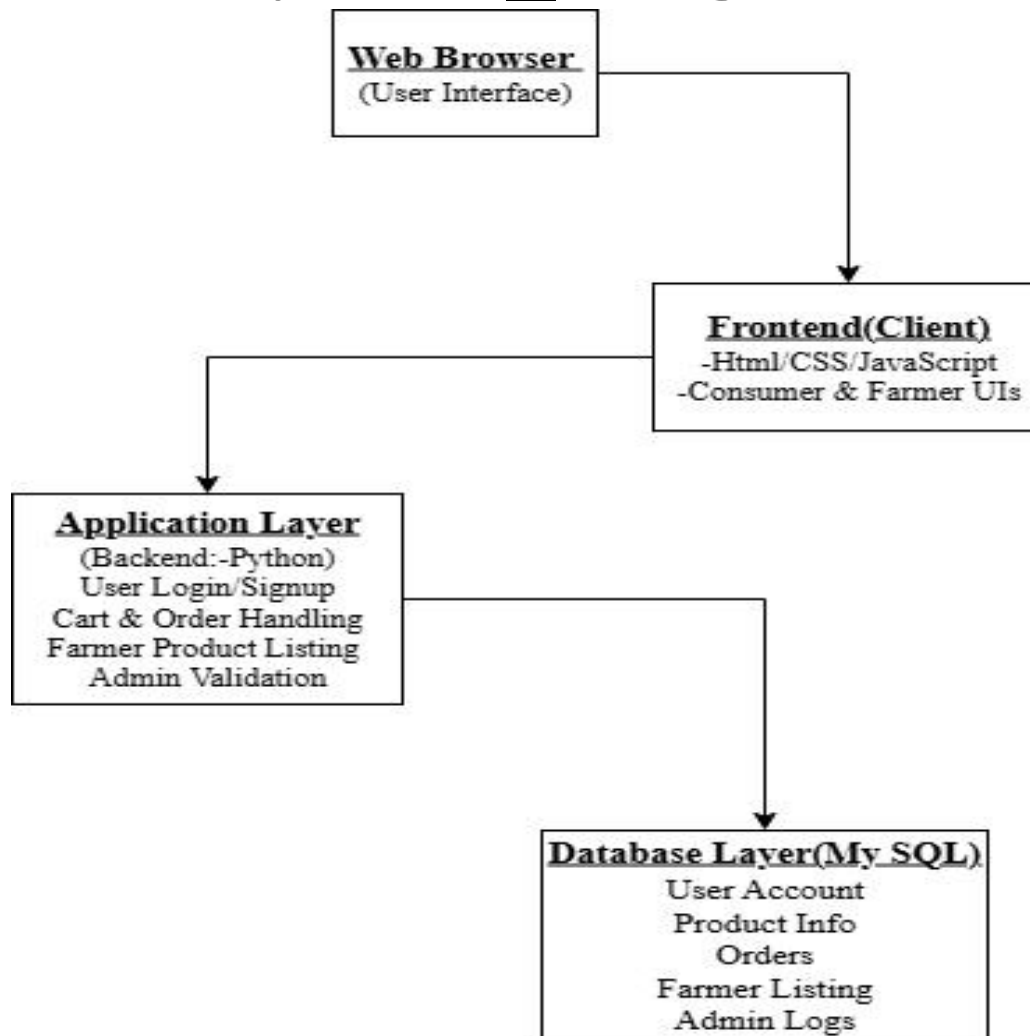

Reporting-2: System Design & Database Development & Data Dictionary

ConnectFarma
Bringing farms to families

System Design

Design Layout ::

1. Home Page

2. Consumer Signup

The background of the page is a colorful illustration of a farm scene. On the left, a farmer with a mustache, wearing a green hat and a yellow shirt with green overalls, holds a large woven basket filled with red tomatoes, orange carrots, and a green pear. On the right, a man in a white polo shirt with the ConnectFarma logo on the chest holds a tablet displaying the same logo. The background shows green rolling hills, a white fence, and some trees under a light green sky.

3. Sign up Cerditianls

The image shows a 'Consumer Signup' form overlaid on a colorful illustration of a farm. On the left, a farmer in a green hat and overalls holds a basket of tomatoes and carrots. On the right, a man in a white polo shirt with the ConnectFarma logo holds a tablet displaying the same logo. The background is a green field with trees and a fence. The form itself is white with a green header 'Consumer Signup'. It contains five input fields: 'Full Name', 'Email' (with a red error message 'Please fill out this field.'), 'Contact Number', 'Password', and 'Confirm Password'. A green 'Sign Up' button is at the bottom of the form, and a link 'Already have an account? Login here' is below it. A small green 'Back' button is in the top left corner of the illustration area.

9. Farmer Sign up Page

The background of the page features two illustrations. On the left, a farmer with a mustache, wearing a green hat and a yellow shirt with green overalls, holds a basket of red tomatoes and green pears. On the right, a staff member in a white polo shirt with the ConnectFarma logo on the chest holds a tablet displaying the same logo. The background is a light green field with trees and a fence.

Database Development

1. Consumer Table

Column Name	Data Type	Constraints	Description
c_id	Int(11)	Primary Key	Consumer id
name	Varchar(30)	Not Null	Consumer Name
email	Varchar(30)	Not Null	User Email id
contact_no	Int(10)	Not Null	Contact Number
password	Varchar(100)	Not Null	Password

2. Farmer Table

Column Name	Data Type	Constrains	Descriptions
f_id	Int(10)	Primary Key	Farmer id
kisanid	Int(13)	Not Null	Kisan Id
name	Varchar(50)	Not Null	Farmer name
email	Varchar(50)	Not Null	Farmer email
contact_no	Int(10)	Not Null	Conatct Number
pincode	Int(07)	Not Null	Pincode
village name	Varchar(100)	Not Null	Village Name
password	Varchar(100)	Not Null	Password

3. Product Table

Column Name	Data Type	Constrains	Description
p_id	Int(10)	Primary Key	Product id
f_id	Int(10)	Foreign Key	Farmer id
p_name	Varchar(100)	Not Null	Product name

Modules and Sub-modules:

Module	Sub-modules
Farmer Module	Registration, Login, Product Upload
Customer Module	Registration, Product Browsing, Add to Cart, Place Order
Admin Module	Approved Users, View Reports, Manage Listings
Order Module	Invoice Generation, Status Updates

1. User Registration (Consumers & Farmers)

Allows both consumers and farmers to sign up by providing basic details like name, email, contact number, and password. Validates input and securely stores user data in the database.

2. Login & Authentication

Enables registered users to log in securely. Authenticates credentials and manages user sessions to personalize access to features.

3. Product Categories

Displays farm product categories like fruits, vegetables, dairy, etc., with images and descriptions. Helps users easily browse what's available.

4. Product Listing & Details

Farmers can upload products with names, prices, and images. Consumers can view product details, availability, and prices before ordering.

5. Order Placement & Cart

Consumers can add items to their cart, review the list, and place an order. The cart system helps manage multiple items and total cost calculations.

6. Admin Dashboard

Provides control to monitor users, products, and orders. Admin can approve farmer accounts, manage data, and ensure smooth operations.

7. Farmer Dashboard

Farmers can manage their profile, add or edit product listings, and track orders received. It simplifies their selling process.

8. Consumer DashBoard

Consumers can view past orders, track current ones, and manage their profile. Gives a clear overview of their buying activity.

9. Contact & Support

A contact page for consumers or farmers to raise questions or concerns. Ensures good communication and trust in the platform.
